

TURNKEY SMART LOCK SOLUTIONS

Convert your offline electronic locks to Wi-Fi direct Smart Locks with ease.

KoreLock provides industry-leading, end-to-end Smart Lock enablement for our partners and customers. Our comprehensive smart lock platform includes embedded firmware, ready-made or custom PCBAs, cloud infrastructure, mobile and web apps, and integration with third-party access control software. This enables our partners and customers to significantly reduce overall development costs and time-to-market.

WHO USES KORELOCK

LOCK MANUFACTURERS

Deploy KoreLock's embedded IoT technology and software stack to develop new Wi-Fi-ready Smart Locks. Leverage our intuitive mobile and web apps to improve your customer's experience.

SPECIALTY LOCK HARDWARE & BRANDS

Expand your portfolio of locks for new target markets or use cases. Extend Smart Lock functionality beyond traditional doors to specialty locking devices such as lockers, cabinet locks, and gates.

PLATFORM & SOFTWARE COMPANIES

Deepen your Smart Lock access control offering with our cloud-to-cloud APIs and the specific features, functionality, and software integrations you need.

KORELOCK BENEFITS

Resource Efficient

Save time and money, and reduce development risks by leveraging KoreLock's proven end-to-end tech stack.

Remote Management via Wi-Fi

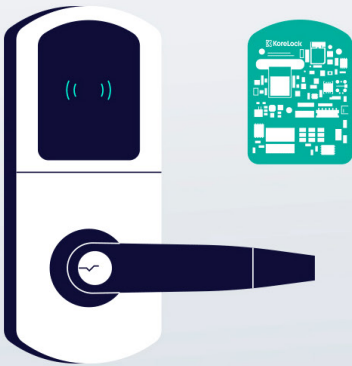

Our patented Wi-Fi technology allows direct connectivity that extends battery life while operating on existing Wi-Fi networks.

Local Management over BLE

Secure Bluetooth® functionality, including lock/unlock, user management, settings, history and mobile credentials.

Credential Flexibility

The KoreLock platform supports multiple credentials types including PINs, temporary PINs, algorithmic PINs, cards and mobile credentials.

Smart Offline Functionality

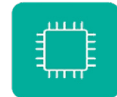

Use our smart offline credentials including mobile keys and algorithmic PINs in non-connected environments.

Patented Technology

By investing in and developing new patents, KoreLock positions its partners to offer cutting-edge solutions and stay ahead of the market.

OUR SOLUTIONS

EMBEDDED FIRMWARE & PCBAS

All the electronics and circuit boards needed to build a Smart Lock "out of the box." Make your own custom PCBAs or use our ready-made KoreLock Module, a plug-n-play "lock on a chip" to provides a full access control feature set, Wi-Fi and Bluetooth® connectivity.

ENABLEMENT SERVICES

End-to-end development of Smart Locks from factory sourcing to mobile apps. KoreLock's engineering and development services include requirements definition, factory management, project management, PCBA design, production, and custom firmware development.

OEM PRODUCTS

Market-ready Smart Lock products that can be white labeled by our customers. KoreLock helps its customers to brand existing hardware with 'KoreLock Inside', or work with our manufacturing partners on new products.

CLOUD SOFTWARE

Intuitive mobile and web apps for local and remote Smart Lock access control. All KoreLock-powered locks can be integrated with any cloud software providing access to multiple hardware and software integrations.
